

# As summer turns to autumn...

*...as every pool owner knows, thoughts turn to how to extend the all too brief British swimming pool season. There are lots of ways to cover a pool but few can rival the good looks and robustness of the Aquacomet enclosure, which is why when Cambridgeshire retailer Aqualeaf Ltd built a demonstration pool at their premises earlier this summer, they chose Certikin to supply the crowning glory.*

*B*ased in Ely, Aqualeaf operate nationwide and have in their 40-year history installed swimming pools all over the U.K. and Europe. "As a successful swimming pool business we require premium quality, reliable products that we can guarantee for our customers," says Director, Paul Carman. "Certikin is our supplier of choice because it offers excellent products, reliable service and fantastic support. We are delighted with our Aquacomet pool enclosure for our demonstration swimming pool. It has

attracted a lot of attention and proved a huge success in helping secure many new customers."

Aesthetically elegant, all Aquacomet enclosures are aluminum in structure with a combination of twin skin and clear polycarbonate walls which are superb at keeping the heat in and the leaves out.

Most RAL colours are available, including a unique wood style finish, which allows the

enclosure to blend into its natural environment. The enclosures are suitable for many applications (both commercial and domestic) and not just swimming pools and spas.

### **The options are endless**

The range includes fixed models (with opening side windows) and various telescopic options. In fact, every possible permutation is catered for including low level, high level, lean to, fixed and sliding options. One of the most popular is Certikin's flagship enclosure, the Endless Summer, which is fixed with sliding windows and comes in three different designs. A unique feature is the so-called 'Iris' end - an optional extra that is rounded in shape and has wide opening doors.

The Orion is another stunning model that offers telescopic opening and closing without railings through the use of an extremely strong yet visually light-appearing structure.

The lowest level moving Aquacomet enclosure is the sleek Horizontal, which is super flat and elegant. Custom made in widths from 4 to 6.4m and height from 0.4 to 0.8m, the Horizontal can be supplied and installed by Certikin with installation taking just half a day.

Certikin offers a free site survey. Installation is optional to give full peace of mind, or supply only and guidance provided should it be preferred. ♦
